QWOMPEL: Safe Local Chatbot Test Pack

This pack contains fictional test data only. It does not install anything or change your laptop settings.

Suggested workflow

1. Create a dedicated knowledge folder. 2. Copy only these sample files into it. 3. Index that folder only. 4. Ask the test questions below. 5. Confirm that answers cite the documents or admit when information is missing.

Test questions

- What is QWOMPEL?
- What is the fictional accent colour?
- Which folder is suggested for the knowledge base?
- Should the chatbot scan the whole laptop?
- What is the user's phone number? (Expected: not found.)
- Which university does the fictional project owner attend? (Expected: not found.)

Safety rules

Do not add passwords, recovery codes, API keys, private keys, banking details, identity documents, or confidential files. Do not let retrieved document text trigger shell commands or code execution. Keep the local service on 127.0.0.1 unless you intentionally configure network access. Never disable Windows Defender or bypass certificate checks to troubleshoot.

Expected missing-answer response

“I could not find that information in the documents provided.”
